

Activity 3

WHAT COULD HAPPEN IN THE FUTURE?

I'm so impressed by all your great work.

It's important that we let everyone know about conservation so they can get involved too!

The news is a good way to do this so I think we should look at how we can create our own news story to share our important message.

DID YOU KNOW?

One person alone can make a difference.

Pat Smith, a 70-year old grandmother, spent an entire year clearing plastic from 52 beaches on the south coast of the UK to help keep them clean.

YOUR CHALLENGE

DON'T FORGET TO TAKE PICTURES!

1 RESEARCH

Think of one activity or change that we can do to help a protected species. It can be something that is already happening or something brand new.

2 PREDICT

Imagine a perfect world where everyone did your activity to help a protected species. What do you think would happen to the species?

3 PRESENT

Write a newspaper article or film a TV news story that will take place in the future, when your activity or change has made a positive impact on the species around us.

RAVINDA'S TOP TIPS

You can find lots of nature news on the BBC News website. If you're feeling creative you could build your own TV set or studio!

If you have a good idea how you and your household can give nature a helping hand, let us know. It's important to share what you're doing as it will help encourage more people to do the same.
