

Activity 3

HOW HAVE ANIMALS ADAPTED?

Well done on all your great work so far! You have now learned all about the food chain.

It's important for scientists to be able to tell others about their findings. An effective way of sharing knowledge is through a documentary.

Can you make one to show what you've learned?

DID YOU KNOW?

Humans are at the top of the food chain – we have no natural predators!

YOUR CHALLENGE

DON'T FORGET TO TAKE PICTURES!

1 PREDICT

Choose an animal and draw how you think its food web would look. Talk about what it likes to eat and if anything would eat it.

2 RESEARCH

Find out about this animal's adaptations. Does it have any special ways of chasing or surprising its food or ways to avoid being eaten?

3 PRESENT

Film a short David Attenborough-style nature documentary explaining how your animal gets its food or perhaps narrowly escapes being someone else's lunch.

RAVINDA'S TOP TIPS

Your animal can be anything – your favourite animal, a pet, a made-up animal or even you!

Watch a nature documentary for inspiration. Hire your family or any willing soft toys as actors, draw backdrops and use props. Be creative and have fun!
